EXPERT INSIGHTS FOR THE INSURANCE INDUSTRY

IN A WINTER STORM, EVERY SECOND COUNTS

As blizzards continue to batter the East Coast, we thought it was a good time to check in with an important reminder:

When dealing with a winter storm event, make sure to prioritize the electronics.

Structural challenges like collapsed roofs and burst water pipes certainly demand immediate attention. But the technical contents of a property should also be addressed as part of a first response. Why?

1) Mitigate damage.

The longer affected equipment sits, the sooner corrosion and rust set in—and the harder it becomes to restore. Determining the cause of the damage also becomes more difficult.

2) Minimize business interruption.

Fully operating computers, phone systems and other technical equipment are as critical to business operations as four walls and a roof.

Get your insured up and running faster. Restore equipment that can be saved. Call TechLoss Consulting & Restoration!

We Keep Businesses Humming

When frozen pipes burst at a Chicago weight loss management company last month, TechLoss was on the scene. Going beyond what a general contractor could have done, our engineers cleaned and restored 95% of the company's computer equipment. Much of the work was done off-site and during off-hours, allowing business to continue as usual—a win all around.

Now in North Carolina!

TechLoss Consulting & Restoration now has an office in Asheville, North Carolina to serve the southeast region even better.

To learn more, call 877-TECHLOSS (832-4567).

CALL IN THE EXPERTS
